SECOND UNDERGROUND4VALUE TRAINING SCHOOL

COST ACTION CA18110

Venue: Facultad de Ciencias del Trabajo, University of Murcia

"Tierra Minera y Cantáora"
Rosario Gijón Bernal

The objective of the Second Underground4value Training School is to realize a five-day intensive programme in Underground Built Heritage conservation and management. The event intends to develop and to make available new skills for planners, decision-makers, promoters and local development facilitators.

The School will work with approximately twelve professors and tutors; they come from different European countries. It will deal with innovative approaches to surveys, analyses, monitoring and testing, in regard to Historic Urban Landscape (HUL), integrating multi-disciplinary knowledge about the underground heritage in a planning framework based on HUL itself. The purpose is advancing tools for empowering local communities, as well as for supporting planners and decision-makers, boosting new job profiles on cultural planning, strategic spatial and transition planning and management. These new profiles will guarantee interaction with local communities, dissemination of innovative thinking and methodologies, supporting the research of social trajectories in an adaptive, forward-looking manner.

The School will provide the participants with tools for elaborating real-life experiments (Living Labs) in a goal-oriented modulation, for shaping strategic dialogue, co-evolution and co-creation.
